November 21, 2019

Mr. Maarten Botterman, Chairman of the Board  
Internet Corporation for Assigned Names and Numbers  
801 17th Street, N.W., Suite 400  
Washington, D.C. 20006

Dear Mr. Botterman,

Because of the pivotal role the Internet Corporation for Assigned Names and Numbers has played in managing the governance of the Internet, I thought you’d like to know the following.

On November 20, 2019, I introduced a House Resolution commemorating the 50th anniversary of the first message sent on the ARPANET. In the Resolution, I recognize the important efforts of government, universities, nonprofit organizations, private companies, and multistakeholder bodies that helped in the establishment of the Internet and continue to aid its growth. I specifically mention ICANN by name, and I’ve enclosed a copy of the Resolution for you.

The Internet is the most powerful network in the history of the world, and I’m hopeful the next 50 years will be as beneficial to society as the last 50. Thank you for your superb leadership and the continuing important role ICANN plays in the Internet’s growth.

Most gratefully,

Anna G. Eshoo  
Member of Congress

Enclosure
RESOLUTION

Recognizing the 50th anniversary of the internet.

Whereas October 29, 2019, was the 50th anniversary of the first message sent from one computer to another using the Advanced Research Projects Agency Network (referred to in this preamble as the ‘‘ARPANET’’), a pioneering predecessor to the internet;

Whereas, on October 29, 1969, researchers using the SDS Sigma 7 Host computer in room 3240 of Boelter Hall at the University of California, Los Angeles (referred to in this preamble as ‘‘UCLA’’), sent the first ever digital data transmission to researchers using the SDS 940 Host computer at the Stanford Research Institute on the ARPANET;

Whereas the internet evolved in the last 50 years from an academic and governmental endeavor to the greatest
communications network in the history of humanity, improving commerce, communications, entertainment, transportation, and so many parts of our economy and society;

Whereas the internet contributes more than $1 trillion of Gross Domestic Product and 3 million jobs to the United States economy annually; and

Whereas the internet developed by efforts from every sector, including—

(1) Congress for funding the ARPANET and other networks and commercializing the internet;

(2) Federal agencies, including—

   (A) the Department of Defense through the Advanced Research Projects Agency (now the Defense Advanced Research Projects Agency) for funding and administering the ARPANET and other networks and developing network protocols;

   (B) the National Science Foundation for funding and administering the Computer Science Network (CSNET), the National Science Foundation Network (NSFNET), and other networks;

   (C) the Department of Commerce through the National Telecommunications and Information Administration for its leadership role in managing multistakeholder technical bodies; and

   (D) the Federal Communications Commission in encouraging adoption and improving access to the internet;

(3) State, local, and Tribal governments for encouraging connectivity and deploying infrastructure;
(4) universities and research institutions for playing a critical role in development of the technologies underpinning the internet, including—

(A) for hosting the first four nodes of the ARPANET—
   (i) UCLA;
   (ii) the Stanford Research Institute (now SRI International);
   (iii) the University of California, Santa Barbara; and
   (iv) the University of Utah;
(B) the RAND Corporation; and
(C) countless other universities, think tanks, and independent researchers;

(5) private companies and nonprofit organizations, including those that—

(A) enable fixed and mobile internet connectivity by deploying infrastructure, including—
   (i) coaxial, copper, and fiberoptic cables for backbone, submarine, middle-mile, backhaul, and to-the-home services;
   (ii) radio and broadcast towers and small cell sites;
   (iii) satellite earth stations;
   (iv) routers, modems, switches, and connectivity equipment; and
   (v) internet exchanges;
(B) produce and sell computers, smartphones, and other devices that connect to the internet;
(C) develop software to administer and access email, the world wide web, and other internet applications;
(D) provide websites, applications, and other software for communications, commerce, education, entertainment, employment, and so many other parts of our lives;

(E) provide cybersecurity services to protect networks, devices, applications, and software; and

(F) enable internet companies through business-to-business services; and

(6) multistakeholder bodies for internet governance, including—

(A) the Internet Corporation for Assigned Names and Numbers;

(B) the Internet Engineering Task Force;

(C) the North American Network Operators’ Group; and

(D) the American Registry for Internet Numbers: Now, therefore, be it

Resolved, That the House of Representatives—

1 (1) recognizes the 50th anniversary of the first internet message; and

2 (2) recognizes the important efforts of government, universities, nonprofit organizations, private companies, and multistakeholder bodies that helped in the establishment and continue to aid in the growth of the internet.
