Re: Information regarding ICANN Contractual Compliance Data Processing Activities and the European Union’s General Data Protection Regulation (GDPR)

Dear Ms. Dixon and Mr. Debeuckelaere:

I wanted to take this opportunity to share some information with you about ICANN org’s data processing activities of our Contractual Compliance department in the course of enforcing ICANN org’s agreements with gTLD registries and registrars. ICANN org has received questions from the community about whether these activities are in compliance with the GDPR. Recently, we sent a letter to the ICANN Registrars Stakeholder Group to provide information on this topic and thought this information also may also be of interest to you.

**Purpose and Legal Basis for Contractual Compliance Processing Activities**

ICANN Contractual Compliance requests registration data to investigate complaints and verify compliance on the legal ground of legitimate interests of ICANN org itself and the parties concerned (Art. 6 para. 1 (f) GDPR). ICANN org is currently working on publishing an overview of its data processing activities related to its contractual compliance function. This overview will set out in more detail the circumstances under which ICANN org requests access to registration data, the legal grounds for such access, and the safeguards implemented due to the direct applicability of the GDPR to ICANN org with respect to such processing.

**Applicability of GDPR and International Transfers of Personal Data**

The GDPR directly applies to ICANN Contractual Compliance processing activities. Depending on the role of the Brussels office of ICANN in the context of these activities, direct applicability of
the GDPR either follows from Art. 3 para. 1 GDPR or under the principle of extra-territorial application of the GDPR enshrined in Art. 3 para. 2 (a) GDPR, the “establishment” and the “targeting” criteria as outlined in the recently published draft guidelines by the European Data Protection Board.\(^1\) In either case the GDPR applies to ICANN Contractual Compliance processing without regard to the location outside the EEA where the processing takes place.

Pursuant to Art. 44 GDPR transfer safeguards, such as Standard Contractual Clauses, are required only with regard to transfers to data recipients located in third countries (i.e. countries outside of the EEA), or in case of international organizations as the data recipients, where such importers are not subject to direct application of the GDPR. If data recipients in third countries are already in the direct scope of applicability of the GDPR, such transfer safeguards will not be required. If the GDPR directly applies, the level of data protection required under the GDPR is ensured.\(^2\)

Because of the direct applicability of the GDPR to ICANN org, no transfer safeguards with registries or registrars are needed, including for any transfers of personal data in response to compliance requests handled by ICANN compliance team members in Los Angeles, Istanbul and Singapore or elsewhere in the world.\(^3\) This includes both, transfers from registries and registrars to ICANN and within the ICANN org. ICANN org will have to implement, however, appropriate technical and organizational measures pursuant to GDPR requirements (which are described below) in order to safeguard such data processing activities.

**Safeguards for Data Processing Activities**

Taking into account the direct applicability of the GDPR to ICANN org, ICANN org also maintains appropriate physical, procedural, administrative, organizational and technical security

---

\(^2\) Art. 29 Working Party (WP) Working Document, Transfers of personal data to third countries: Applying Articles 25 and 26 of the EU data protection directive, 24 July 1998, clarifies the reason for using contractual safeguards such as Standard Contractual Clauses for transfers of data outside of the EEA: “In the context of third country transfers, therefore, the contract is a means by which adequate safeguards can be provided by the data controller when transferring data outside of the Community (and thus outside the protection provided by the directive, and indeed by the general framework of Community law) to a third country where the general level of protection is not adequate. For a contractual provision to fulfil this function, it must satisfactorily compensate for the absence of a general level of adequate protection, by including the essential elements of protection which are missing in any given particular situation.” The Art. 29 WP makes a point that such contractual safeguards are only needed with regard to transfers outside of the EEA where the protection provided by the EU Data Protection Directive does not apply. As the principles for international data transfers have not changed under the GDPR, this rationale remains applicable.

\(^3\) Lokke Moere, GDPR conundrums: Data transfer ([https://iapp.org/news/a/gdpr-conundrums-data-transfer](https://iapp.org/news/a/gdpr-conundrums-data-transfer)) confirms this view for U.S. controllers within direct applicability of the GDPR: “If the original data processing by the U.S. controller is governed by the GDPR, the full scope of protection already applies to the controller […]. Here, imposing additional requirements by the processor onto the original controller is not useful and the transfer rules therefore do not add any value. Also, the transfer rules should simply not apply.”
measures intended to prevent loss, misuse, unauthorized access, disclosure, or modification of personal data under our control, including the following measures:

- **Identification and Monitoring of users with access to personal data** – ICANN org has a system of access controls in place for users with access to personal data. This includes proper access controls and restricted access to personal data. Only authorized users may gain access to personal data on an “as-needed” basis.

- **Assessment of security controls** – ICANN org has a documented process for regularly testing, assessing, and evaluating the effectiveness of technical and organizational measures for ensuring the security of the processing in place. This involves manual assurance through audits, assurance reviews, penetration testing and red-team activities, as well as consolidated and integrated security products, so that fewer point products need to be managed and reported on.

- **Safeguards Requirement on Processors** – ICANN org has a documented process for imposing data processing requirements, in line with Art. 28 GDPR, on data processors who process personal data on behalf of ICANN.

- **Data Subject Rights** – ICANN org has a documented process for processing data subject rights requests with respect to any personal data from gTLD registrations it processes.

**Data Retention**

ICANN org recognizes that the retention of personal data related to the above activities must be compliant with Articles 5(e) and Article 17 of the GDPR, among other related obligations affecting retention of personal data. To address personal data deletion requirements under the GDPR, ICANN org has developed and implemented a data deletion program consisting of policies and procedures for the destruction of personal data relating to EU data subjects, including deletion upon a data subject’s request under the GDPR.
We hope you find this information to be helpful in understanding ICANN Contractual Compliance’s data processing activities. We are happy to provide additional information as needed on the steps ICANN org is taking to ensure its Contractual Compliance-related data processing activities are in compliance with the GDPR.

Best regards,

Göran Marby
President and Chief Executive Officer
Internet Corporation for Assigned Names and Numbers (ICANN)
