Security and Stability Advisory Committee (SSAC)	SAC060	http://www.icann.org/en/groups/ssac/documents/sac-060-en.pdf	Active Variant TLDs (14 of 14)	7/23/2013	ICANN should ensure that the number of strings that are activated is as small as possible.	Closed	ICANN agrees with this recommendation and the number of strings that may become activated as a result of the Label Generation Rules for the Root Zone (LGR) procedure should be minimal. Similar to SAC060 Recommendation 5, the IDN LGR procedure is designed to follow a conservative and minimalist approach to maintain the security and stability
Security and Stability Advisory Committee (SSAC)	SAC060	http://www.icann.org/en/groups/ssac/documents/sac-060-en.pdf	Active Variant TLDs (13 of 14)	7/23/2013	The TMCH must add support for IDN variant TLDs. Particularly during the TM Claims service, a name registered under a TLD that has allocated variant TLDs should trigger trademark holder notifications for the registration of the name in all of its allocated variant TLDs.	Closed	ICANN responded to the SSAC most recently in early 2016, and is awaiting a response before taking further action. However, projects focused on planning and implementation of IDN variant TLDs are ongoing. TMCH Resources: - General information on TMCH: http://newgtlds.icann.org/en/about/trademark-clearinghouse -

Closed	This specific advice item is directed at Registries and contains no actionable advice for ICANN.
Security and Stability Advisory Committee (SSAC)	SAC060	http://www.icann.org/en/groups/ssac/documents/sac-060-en.pdf	Active Variant TLDs (10 of 14)	7/23/2013	The current rights protection regime associated with the Trademark Clearinghouse (TMCH) process is susceptible to homographic attacks. The roles of the involved parties, specifically registrars, registries, and TMCH, related to matching must be made clear.	Closed	ICANN responded to the SSAC most recently in early 2016, and is awaiting a response before taking further action. Closed	This specific advice item is part of project 2.1 LGR Procedure. Information on Project 2.1 of the LGR can be found here: https://community.icann.org/display/VIP/P2.1-Label+Generation+Ruleset+Process+for+the+Root Considerable work has been underway on IDNs and IDN variants. Security and Stability Advisory Committee (SSAC)	SAC060	http://www.icann.org/en/groups/ssac/documents/sac-060-en.pdf	Active Variant TLDs (6 of 14)	7/23/2013	Because the removal of a delegation from the root zone can have significant non-local impact, new rules added to a LGR must, as far as possible, be backward compatible so that new versions of the LGR do not produce results that are incompatible with historical (existent) activations.	Closed	ICANN agrees with this recommendation and backwards compatibility will be one of the main considerations the Integration Panel has to take into account in each release of the IDN LGR. The LGR procedure including guidelines has been put in place (Project 2.1 of the IDN Variant TLD Program) and is being imposed by integration panel. General information on

Closed	ICANN agrees with this recommendation and the IDN LGR procedure is designed to follow a conservative and minimalist approach to maintain the security and stability of the root zone. Closed	ICANN agrees with this recommendation. The implicit assumption of the current LGR work is that the root zone will use one and only one set of label generation rules.
