OVERVIEW OF ACTIVITY

Audit Program
The Audit team is currently planning the next Registry Compliance Audit.

Contractual Compliance Enforcement
All notices can be found here.

Notice of Breach
On 10 January 2022, ICANN sent a Notice of Breach to the registrar TOGLODO S.A. The breach was a result of the failure of the registrar to:
1) Timely pay past due accreditation fees;
2) Escrow generic top-level domain (gTLD) registration data;
3) Provide domain name data in the specified response format;
4) Publish an email address to receive abuse reports on the homepage of TOGLODO’s website;
5) Publish on its website a description of TOGLODO’s procedures for the receipt, handling and tracking of abuse reports;
6) Publish the full name and position of all officers of the Registrar on TOGLODO’s website;
7) Include a link in its registration agreement to its renewal fees, post-expiration renewal fees (if different) and redemption/restore fees; and
8) Include in its registration agreement a description of the methods used to deliver pre- and post-expiration notifications.

The registrar failed to cure the Notice of Breach and, as a result, a Notice of Termination of its accreditation with ICANN was issued on 7 February 2022.

On 18 January 2022, ICANN sent a Notice of Breach to the registrar HOAPDI INC. The breach was a result of the failure of the registrar to:
1) Pay past due accreditation fees; and
2) Provide an interactive webpage and a port 43 WHOIS service providing free public query-based access to up-to-date data concerning all active registered names sponsored by HOAPDI for each gTLD in which it is accredited.

The deadline to cure the Notice of Breach was 8 February 2022.

On 28 January 2022, ICANN sent a Notice of Breach to the registrar Atak Domain Hosting Internet ve Bilgi Teknolojileri Limited Sirketi d/b/a Atak Teknoloji. The breach was a result of the failure of the registrar to:
1) Provide records to ICANN that are related to abuse reports;
2) take reasonable and prompt steps to investigate and respond appropriately to reports of abuse; and
3) Provide an interactive webpage and a port 43 WHOIS service providing free public query-based access to up-to-date data concerning all active registered names sponsored by the registrar for each gTLD in which it is accredited.

Notices of Suspension/Terminations
On 13 January 2022, ICANN sent a Notice of Suspension to the registrar Threadagent.com, Inc. due to the registrar’s failure to fully cure the 22 December 2021 Notice of Breach. The suspension became effective on 28 January 2022 and will conclude on 28 April 2022 if the registrar cures the remaining Registrar Accreditation Agreement (RAA) violations on or before 7 April 2022. During the 90-day suspension period, the registrar will be unable to create new registered names or initiate inbound transfers. Escalated compliance action (including RAA termination) may occur if the registrar fails to fully cure the remaining RAA violations by the 7 April 2022 deadline or if ICANN receives additional information demonstrating that Threadagent.com, Inc. continues to violate the RAA or Consensus Policies, during or after the suspension period ends.
Enforcement Notices Escalated to the ICANN Legal Team (mediation)
No escalations were received by the ICANN Legal team.

Compliance Matters Related to Registrars and Registry Operators
In January, Contractual Compliance received 816 new complaints (734 against registrars, and 82 against registry operators), and sent 263 inquiries and notices (collectively referred to as “compliance notifications”) to contracted parties. This number (263) refers to first, second, and third compliance notifications and does not account for notifications sent to request clarification or additional evidence following a contracted party’s response.

Most of the notifications sent to registrars addressed obligations related to registration data inaccuracy, abuse, and transfers. Most notifications sent to registry operators addressed obligations related to zone file access and monthly reports. During the month of December, the Contractual Compliance team closed 854 complaints without contacting the contracted party.

Examples of complaints closed without contacting the contracted party include instances in which the complainant:
- Did not respond to ICANN Contractual Compliance’s request for evidence
- Complained about a domain registered in a country code top-level domain (ccTLD)
- Submitted a duplicate complaint either before resolution of the original complaint or about an issue that was already resolved at the time the complaint was reviewed (e.g., the domain is subject to a pending WHOIS inaccuracy complaint)

In all the cases, the Compliance team educated complainants on ICANN’s authority and provided alternatives where appropriate.

Enforcement of the Temporary Specification for gTLD Registration Data via the Interim Registration Data Policy
In January, the Contractual Compliance team continued to process Temporary Specification-related compliance inquiries. We initiated five new inquiries concerning third-party access to non-public registration data in the Registry Registration Data Directory Services (RDDS) (Section 4.1, Appendix A), one new inquiry concerning the display of registration data in the RDDS (Sections 2.2-2.6 Appendix A). In addition, the Contractual Compliance team continued addressing previously submitted cases currently under remediation or pending further response and collaboration. It also continued educating complainants on Temporary Specification requirements for out-of-scope or invalid complaints (e.g., where complainants believe registration data redacted per the Temporary Specification is “missing” from public WHOIS, privacy, or proxy service data are redactions, or that all non-European data should be displayed, etc.).

In January, the Contractual Compliance team continued:
- Providing contractual compliance input for implementation of the General Data Protection Regulation (GDPR) and the Expedited Policy Development Process (EPDP) Phase 1 recommendations, specifically concerning policy language and enforcement
- Attending Board Caucus calls concerning EPDP and GDPR
- Providing metrics related to complaints related to alleged violations of the Temporary Specification and compliance notices or inquiries sent and closed during the month

Registration Data Access Protocol (RDAP) Implementation
In January, the Contractual Compliance team continued processing service-related compliance notifications for the Registration Data Access Protocol (RDAP). From October 2019 to January 2022, the Contractual Compliance team continued to process notifications with respect to the implementation of the
RDAP service and registration of base Uniform Resource Locators (URLs). Current information indicates that three top-level domains (TLDs) and 106 registrars have not yet uploaded their URL to the Naming Services portal (NSp) or registered their URL with the Internet Assigned Numbers Authority (IANA), respectively. The Contractual Compliance team continues to collaborate with these contracted parties that have not yet implemented RDAP, and those that have presented remediation measures to become compliant. These contracted parties are requested to provide regular updates to their open compliance tickets regarding their progress towards remediation. To date, the Contractual Compliance team has received no third-party complaints concerning RDAP. There has been no indication that any registrars or registry operators have ceased to operate WHOIS services.

Policy and Working Group Efforts
The Contractual Compliance team worked with the Global Domains Strategy (GDS) team on assessing the multiple recommendations produced by review teams. The following activities that took place:

- Provided input regarding metrics used for the Domain Name Marketplace Indicators initiative
- Continued providing contractual compliance input for implementation of the EPDP on the Temporary Specification for gTLD Registration Data Phase 1 recommendations
- GNSO Transfer PDP Working Group (WG) – addressed the WG’s question of whether the Contractual Compliance team will be able to enforce requirements relating to the discussed Transfer Authorization Code (TAC) Request, Pending Transfer, and Transfer Completion notifications without the provision of mandatory templates. The Contractual Compliance team agreed with the suggestion to enforce the proposed “TAC Request,” “Pending Transfer,” and “Transfer Completion” notifications without provision of mandatory templates.
- Provided input regarding the content of the notifications e.g., requirements not to include irrelevant information (e.g., advertisements of other services), inclusion of instructions for the Registered Name Holder (RNH) to invalidate the TAC, if the TAC was not requested by RNH

Registrar and Registry Compliance Checks
In response to requests from the GDS team to verify that a contracted party is in good standing, a total of 10 registrars and three (3) TLDs went through compliance reviews during this reporting period.

Outreach
There were no events in January 2022.
