

Why I would like to serve as a member of ATRT

My main motivation for applying as a member of ATRT is my willingness to contribute to current Internet ECO-system as a member of the Internet community. In order to maintain the free and innovative Internet, I believe it is important to gain broad understanding and support from a wide range of stakeholders from the community in all parts of the world. As a member of such community, I would like to support ICANN's activity from Japan.

Needless to say, ICANN has been serving as a core organization and having a major role in that system. I believe ensuring to have an effective review is extremely important to keep ICANN open and transparent, and I would like to contribute to the review with my following experience:

- Has been taking part in the IP resource policy discussions in the Asia Pacific region, which consist of many different communities as well as economies with varying needs since 2001.
- Leading policy discussions in Japan as a chair of the Japan IP Policy Working Group, which is a coordination body of the IP resource policy development process in Japan from 2004 to 2011.
- Technical knowledge especially in the IPv6 area by participating in protocol discussions in the Internet standardization organization, IETF.
- Knowledge about ICANN and its policy making process by participating several ICANN meetings as an ASO/AC member.
- Knowledge about private sectors' needs and expectation to the ICANN based on my work experience in Japanese telecom carrier.

I would like to make use of above experience to review the ICANN PDP and collect community inputs efficiently.
