Introduction to LGR Toolset

- Label Generation Rulesets (LGRs) specify metadata, code point repertoire, variant rules and Whole Label Evaluation (WLE) rules to generate labels.

- RFC 7940 describes how LGR can be specified using XML, a machine-readable format.

- LGR can be used to generate domain name labels for use in the internet’s root zone and other levels.

- LGR Toolset can be used to:
  - create an LGR
  - view LGR as an HTML webpage or XML Format
  - merge multiple LGRs into a single LGR
  - validate single label or multiple labels using an LGR
  - determine cross-script variants of labels using a merged LGR
  - manage LGRs by comparing or combining them
  - review possible impact of a new or a revised LGR on existing labels
  - harmonize multiple LGRs
  - compute variants
Availability of LGR Toolset

- LGR Toolset is available with the following disclaimer:

  THIS SOFTWARE IS PROVIDED BY ICANN AND CONTRIBUTORS ``AS IS'' AND ANY EXPRESS OR IMPLIED WARRANTIES, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE DISCLAIMED. IN NO EVENT SHALL ICANN OR CONTRIBUTORS BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING, BUT NOT LIMITED TO, PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES; LOSS OF USE, DATA, OR PROFITS; OR BUSINESS INTERRUPTION) HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OF THIS SOFTWARE, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE.

- Online deployment
  - Visit https://lgrtool.icann.org/

- Open source package(s) release with BSD license
  - Released at github: lgr-core, lgr-django, munidata, picu

- For queries or feedback
  - Email to IDNProgram@icann.org

- For further details, visit the LGR Toolset webpage or www.icann.org/idn
Agenda

1. Landing Page (pp. 11-12)
2. Validate label(s) against an LGR (pp. 13-19)
3. Advanced LGR Tools (pp. 20-21)
4. Importing an existing LGR in a toolset (pp. 22-25)
5. Importing multiple LGRs in a toolset (pp. 26-29)
6. Creating an LGR via toolset (pp. 30-56)
Agenda

7. Validating LGR (pp. 57-60)
8. Viewing LGR as XML and HTML (pp. 61-72)
9. Validating a label using an LGR (pp. 73-78)
10. Reviewing impact on existing labels by revising an existing LGR (pp. 79-84)
11. Reviewing impact on existing labels by introducing a new LGR (pp. 85-90)
12. Validating multiple labels using LGR(s) (pp. 91-97)
Agenda (cont.)

- **13**: Viewing cross-script variants of labels (pp. 98-103)
- **14**: Comparing LGRs (pp. 104-108)
- **15**: Harmonizing multiple LGRs (pp. 109-112)
- **16**: Computing variants (pp. 113-116)
Agenda Details

- **Landing Page**
  - Basic Mode - Validate label(s) against an LGR
  - Review Mode - Review IDN table(s)
  - Advanced LGR Tools
  - Generate ICANN IDN Report
  - Manage IDN review tool

- **Validate label(s) against an LGR**
  - Validate label against RZ-LGR
  - View LGR as XML and HTML
  - Validate a single label or list of label(s)
  - Check label(s) for collision with existing TLD

- **Advanced LGR Tools**

- **Import or Load LGR**
  - Import LGR
  - Select LGR with validating repertoire

- **Import Multiple LGRs**
  - Import LGR
  - Select multiple LGRs with validating repertoire
  - Specify name of the merged LGR
Agenda Details (cont.)

- Create LGR
  - Create LGR
  - Enter LGR Details
  - Add Code Points
  - Expand Ranges
  - Add References
  - Define Meta Data
  - Define Classes, Rules & Actions
  - Define Code Point Properties
  - Download LGR

- Validate LGR

- View LGR as XML and HTML

- Validate a label
  - Validate a label using a single LGR
  - Validate a label using a merged LGR

- Review Impact on Existing Labels by Revising an Existing LGR
  - Select “Diff labels of two LGRs”
  - Enter Details
Agenda Details (cont.)

- Email Notification
- Download Results

○ **Review Impact on Existing Labels by Introducing a New LGR**
  - Select “Get collisions in a list of labels”
  - Enter Details
  - Email Notification
  - Download Results

○ **Validate Multiple Labels using a single or a merged LGR**
  - Select “Generate disp. annotations”
  - Enter Details
  - Email Notification
  - Download Results

○ **View Cross-script Variants of Labels**
  - Select “Cross-script variants”
  - Enter Details
  - Email Notification
  - Download Results

○ **Compare LGRs**
  - Compare LGRs
Agenda Details (cont.)

- Select Union, Intersection or Difference
  - With merged LGRs, “Diff” chosen by default

- **Harmonize multiple LGRs**
  - Select “Harmonization”
  - Enter Details
  - Email Notification
  - Download Results

- **Computing variants**
  - Select “Compute Variants”
  - Select relevant LGR
  - Upload list of labels and enter email
  - Download results on email notification
Landing Page

Agenda Item #1
Welcome to the LGR (Label Generation Ruleset) Tools

Select your mode:

- **Basic Mode**
  - Validate label(s) against an LGR
  - Review IDN table(s)

- **Advanced Mode**
  - Advanced LGR Tools
  - Generate ICANN IDN report
  - Manage IDN review tool

If you have questions, please contact globalsupport@icann.org
Validate label(s) against an LGR – Basic Mode

Agenda Item #2
Validate label(s) against an LGR

Label Validation Tool

Validate label(s) against

View LGR as XML | HTML

Upload a list of labels

Check for collision with existing TLDs

Validate

Your saved results
The following files contains your tools computation results.

⚠️ Note that these files could be cleaned up regularly.

- Download 20210528 105900 annotation lgr-4-arabic-script-29jun20-en.txt.gz
Validate label(s) against an LGR

1. Select required version of RZ-LGR

2. View RZ-LGR version as XML or HTML

3. Two ways to upload label(s)
   - 3.a. Enter a single label or multiple labels manually
   - 3.b. Upload a list of labels

Check for collision with existing TLDs
Validate label(s) against an LGR (Manual Entry of label)

1. Enter label here

2. To add or remove new label

3. Check if label entered collides with existing TLDs

4. “Check for collision” functionality requires email

5. Press “Validate” to get results
Validate label(s) against an LGR (Manual Entry of label)

Validate label(s) against

View LGR as XML | HTML

Upload a list of labels

Check for collision with existing TLDs

Validate

INVALID

<table>
<thead>
<tr>
<th>U-label</th>
<th>Disposition</th>
<th>Code point sequence</th>
</tr>
</thead>
<tbody>
<tr>
<td>xn-rgbvg4adz41a3fyu</td>
<td>invalid</td>

</tbody>
</table>
Validate label(s) against an LGR (Upload list of label)

1. Upload file encoded in UTF-8 and using Unix line ending

2. Check if file entered collides with existing TLDs

3. “Check for collision” functionality requires email

4. Press “Validate” to get results

5. To go back to manual entry of labels
Validate label(s) against an LGR (Upload list of label)

Manually input label(s)

Choose File test.txt

File must be encoded in UTF-8 and using UNIX line ending.

Check for collision with existing TLDs

test@test.tld

As the computing may be very long, we will warn by e-mail once the result can be downloaded.

Your saved results
The following files contains your computation results.

⚠️ Note that these files could be cleaned up regularly.

Advanced LGR Tools

Agenda Item #3
Advanced LGR Tools

Advanced LGR (Label Generation Ruleset) Tools

This application provides a convenient interface for browsing and editing LGRs conforming to the Representing Label Generation Rulesets using XML specification.

Previously loaded LGR file(s)
Previously, you edited the following LGR file(s). Click on its title to resume your editing session.

LGRs
- View sample-french
- View union-of-sample-french-and-igr-4-arabic-script-29jun20-en

Create a new LGR file or import an existing one

Your saved results
The following files contains your tools computation results.

⚠️ Note that these files could be cleaned up regularly.
- Download 20210528_102129_collisions_igr-4-arabic-script-29jun20-en.txt.gz

⚠️ Note that importing large LGR files may take significant time to load on your browser.

Start with a New blank XML file

Start from a built-in LGR
The following LGRs are pre-installed in the system. You may use them as a starting point for your own LGR. To do so, just click on it to make a copy that you can then edit.

- Open Sample-French
- Open igr-1-common-24feb16-en
- Open igr-2-common-26jul17-en
Import or Load LGR

Agenda Item #4
Import or Load LGR

Advanced LGR (Label Generation Ruleset) Tools

To start by using an existing LGR file in XML format, click on the “Import” button.
Select LGR with Validating Repertoire

1. To import or load an existing LGR in XML format, click on “Choose Files”

2. Choose the “Validating repertoire” from the given options

3. Click on the “Import” button
Imported LGR

The screen looks like this after successful import of existing LGR file in XML format

Import Multiple LGRs

Agenda Item #5
To start by using existing LGR files in XML format, click on the "Import" button.
Select LGRs with Validating Repertoire

1. To import or load multiple LGRs in XML format, click on “Choose Files” and select multiple files.

2. Choose the “Validating repertoire” from the given options.

3. Enter a name for the set of LGRs.

4. Click on the “Import” button.
Imported LGRs As a Merged LGR

The screen looks like this after successful import of multiple LGR files in XML format.
Create an LGR

Agenda Item #6
To start by creating an LGR file in XML format, click on the “New” button.
Enter LGR Details

1. Write name for the LGR being created

2. Select Validating repertoire from the given options for the “New” LGR. MSR for RZ-LGR and IDNA version for second level LGRs

3. Click on the “Create” button
Click on “Add code points” to add code points to the newly created LGR.
Add Code Points

To add code points, there are four different ways:

1. Add code points one by one
2. Add code points by giving a range
3. Add code points by specifying a script
4. Add code points from a file
Add Code Points

1. Write the code point to be added. The code point value or the actual character can be entered.

2. Click on the “Add Code Point” button.
Add Code Points

1. Add the first code point of the range

2. Add the last code point of the range

3. Click on “Next” button

Either code point value or the character can be added
Add Code Points

1. Select a script from the given options
2. Select Validating Repertoire from the given options
3. “Manual import” is optional – allows checking each code point in the script before adding to the LGR
4. Click on “Next” button
Add Code Points

1. Select the file containing code points

2. Select the file type from the given options

3. “Manual import” is optional – allows checking each code point in the file before adding to the LGR

4. Click on the “Next” button
To expand all the code points in all the ranges of the LGR, click on “Expand range(s)”.

To expand all the code points in this range, click on “Expand range”.

Apply Batch Action – Add WLE

1. Add when-rule / not-when-rule from the list of WLE rules

2. Click on “Next” button
Apply Batch Action – Add Tags

1. Type new tags, separate by a space, or select the existing ones
2. Click on “Next” button
Define Code Point Properties

Click on the “See code point” button to add code point details/properties
1. Add variant for the code point
2. Click on the “Add variant button”
3. Add details for the added variant – type, comments, when-rule and not-when rule
4. Add tags for the code point
5. Add when-rule/not-when rule from the list of rules it provides
6. Add any description for the code point
Define Code Point Properties - 2

7. Click on “Save variants, tags, context rules and comment” button

Note: If the added code point is not in the repertoire, the system will automatically add the out-of-repertoire mapping.

8. Click on the “Edit” button to add references to the code point

To delete code point & its details, click on the “Delete code point” button
Define Code Point Properties - 3

The screen looks like this after successfully defining code point properties.

If the variant definitions are not symmetric, this button will show up. Click “Populate variants” to automatically populate variant mappings.
Click on “Output” and select “Download” from the given options to download the created LGR.
Validate LGR

Agenda Item #7
Click on “Validate LGR” button to validate LGR and get a summary of the entire LGR. It is important to note that this function should be used for checking an LGR before use, e.g. when it is created or imported.
Validate LGR

Summary of checks performed, including symmetry and transitivity.
Validate LGR

Second half of the “Validate LGR” output

Summarized LGR
View LGR as XML and HTML

Agenda Item #8
Click on “Output” and select “View XML” from the given options to get an XML view of the LGR.
View LGR As XML

    <h1>Label Generation Rules for the Thai Script</h1>
    <h2>Overview</h2>
    <p>This file contains Label Generation Rules (LGR) for the Thai script as would be appropriate for the Root zone. For more details on this LGR see "Proposal for a Thai Script Root Zone LGR [Proposal]".</p>
    <h2>Repertoire</h2>
  ]]></lg>
```

2. In addition to the 68 code points according to Section 5 "Repertoire" in [Proposal], three sequences have been defined. The sequence U+0E4D U+0E32 was defined to replace the disallowed U+0E33 (THAI CHARACTER SARA AM) and to facilitate implementation of WLE rule <b>follows-consonant-tone</b> as a context rule. The other two sequences were defined to restrict U+0E45 (THAI CHARACTER LAKKHANYAO) from appearing in any context other than these sequences. Accordingly, while U+0E45 is not listed by itself it brings the total of distinct code points to 69.</p>

3. According to Section 6 "Variants", in "[Proposal]", this LGR defines no variants.</p>

The Thai Script is an abugida in which consonant–vowel sequences are written as a unit: each unit is based on a consonant letter, and vowel, tone mark or diacritic notation are secondary. It is written with the combining marks stacked above or below the base consonant, like diacritics in European languages. However, although the concepts are quite similar, the implementations are significantly different.</p>

There are 44 characters that are classified as consonants, code points from this subset have been given the tag "cons".</p>

The 18 vowel symbols pronounced after a consonant are non-sequential: they can be located before (lv), after (fv), above (av) or below (bv) the consonant, or in a combination of these positions, code points from this subset have been given the tag "fv1","fv2","fv3","av","bv","lv". There are three code point sequences defined that include vowels. (Code point sequences do not carry tag values; instead, for code point sequences the subset values are indentified in comments).</p>

There are 5 phonemic tones: mid, low, falling, high, and rising. These 5 tones are represented by 4 tone marks plus the absence of a mark. Code points from this subset have been given the tag "tone".</p>

There are 3 diacritic symbols that have been included here and given the tag "ad". They differ in their frequency and purpose of usage. See also the discussion in section 5.4 in [Proposal].</p>

<ul>
  <li>U+0E47 (MAITAIKHU) and U+0E4C (THANTHAKHAT) are commonly used in everyday communicating words</li>
  <li>U+0E4D (NIKHAHIT) is included because of its use to decompose U+0E33 (SARA AM, "Am"") and to be used by label scripts that are close to Thai language</li>
</ul>

## Description

This document is mechanically formatted from the XML file for the LGR. It provides additional summary data and explanatory text. The XML file remains the sole normative specification of the LGR.
Label Generation Rules for the Thai Script

Overview

This file contains Label Generation Rules (LGR) for the Thai script as would be appropriate for the Root zone. For more details on this LGR see "Proposal for a Thai Script Root Zone LGR [Proposal]."

Repertoire

In addition to the 68 code points according to Section 5 “Repertoire” in [Proposal], three sequences have been defined. The sequence U+0E4D U+0E32 was defined to replace the disallowed U+0E33 (THAI CHARACTER SARA AM) and to facilitate implementation of WLE rule follows-consonant-tone as a context rule. The other two sequences were defined to restrict U+0E45 (THAI CHARACTER LAKKHANDARYAO) from appearing in any context other than these sequences. Accordingly, while U+0E45 is not listed by itself it brings the total of distinct code points to 69.

Variants

According to Section 6 “Variants”, in "[Proposal]", this LGR defines no variants.

Character Classes

The Thai Script is an abugida in which consonant–vowel sequences are written as a unit: each unit is based on a consonant letter, and vowel, tone mark or diacritic notation are secondary. It is written with the combining marks stacked above or below the base consonant, like diacritics in European languages. However, although the concepts are quite similar, the implementations are significantly different.

There are 44 characters that are classified as consonants, code points from this subset have been given the tag "cons".

The 18 vowel symbols pronounced after a consonant are non-sequential: they can be located before (lv), after (fv), above (av) or below (bv) the consonant, or in a combination of these positions, code points from this subset have been given the tag "fv1", "fv2", "fv3", "av", "bv", "lv". There are three code point sequences defined that include vowels. (Code point sequences do not carry tag values; instead, for code point sequences the subset values are indentified in comments).

There are 5 phonemic tones: mid, low, falling, high, and rising. These 5 tones are represented by 4 tone marks plus the absence of a mark. Code
### Repertoire

#### Summary

<table>

<th>434</th>
</tr>
</thead>
<tbody>
<tr>
<td>Number of ranges in repertoire</td>
<td>0</td>
</tr>
<tr>
<td>Number of code point sequences</td>
<td>4</td>
</tr>
</tbody>
</table>

#### Repertoire by Code Point

The following table lists the repertoire by code point (or code point sequence). The data in the Script and Name column are extracted from the Unicode character database. Where the comment in the original LGR is equal to the character name, it has been suppressed.

For any code point or sequence for which a variant is defined, the link to the associated variant set, or if mapped to itself, the variant type of that mapping is provided in the Variants column.

</tr>
</tbody>
</table>

The following tables list all variant sets defined in this LGR, except for singleton sets. Each table lists all variant mapping pairs of the set, one per row. Mappings are assumed to be symmetric: each row documents both forward (→) and reverse (←) mapping directions. In each table, the mappings are sorted by Source value in ascending code point order; shading is used to group mappings from the same source code point or sequence.

Where the type of both forward and reverse mappings are the same, a single value is given in the Type(s) column, otherwise the types for forward and reverse mappings, as well as comments and references are listed above one another.

A mapping where source and target are the same is reflexive. Variant sets consisting of only a single reflexive mapping are not shown as a set. Instead, the variant type of the mapping is listed in the Variants column of the Repertoire by Code Point table. Reflexive mappings that are part of a larger set are indicated with a “=*”.

In any LGR with variant specifications that are well behaved, all members within each variant set are defined as variants of each other; the mappings in each set are symmetric and transitive; and all variant sets are disjoint.

### Common Legend

- **Source**: Source of the mapping pair.
- **Target**: Destination of the mapping pair.
- **Glyph**: The shape displayed for source or target depends on the fonts available to your browser.
- **→**: forward: Indicates that variant Type, References and Comment apply to the mapping from source to target.
- **←**: reverse: Indicates that variant Type, References and Comment apply to the reverse mapping from target to source.
- **↔**: both: Indicates that variant Type, References and Comment apply to both forward and reverse mapping.
- **=**: reflexive: Indicates that variant Type, References and Comment are for a reflexive mapping where source equals target.
- **☐**: not in LGR: Indicates that variant is not in LGR.

### Type

The type of the variant mapping. There are some predefined variant types such as “allocatable” and “blocked”, while others are defined specifically for each LGR.

### References

One or more reference IDs (optional). A “” separates references for reverse / forward mappings, if different.

### Comment

A descriptive comment (optional). A “” separates comments for reverse / forward mappings, if different.

Validate a Label

Agenda Item #9
## Validate a Label

1. Click on “Import” to load single or multiple existing LGR files. See “Import” for details.

2. Always view “Validate LGR” output as the tool checks the loaded LGR(s) during this process.

3. For validating a label, click on “Validate label” button.
Validate a Label with a Single LGR

1. Enter the label to be validated
2. Click on the "Validate" button
Validate a Label with a Single LGR

Result given by “Validate label” shows whether the label is valid or invalid and also lists its variants, their dispositions and the rules/actions against which the label or any of its variants is valid or invalid.
Validate a Label with a Merged LGR

1. Enter the label to be validated

2. Select a script from the list of the scripts of different LGRs forming the merged LGR

3. Click on the “Validate” button
Validate a Label with a Merged LGR

Result given by “Validate label” shows whether the label is valid or invalid and also lists its variants, their dispositions and the rules/actions of which the label or any of its variants is valid or invalid.
Review Impact on Existing Labels by Revising an Existing LGR

Agenda Item #10
Review Impacts on Existing Labels Caused by Reviewed LGR

Click on “Diff labels of two LGRs” button to determine differences caused by modifying an LGR.
Enter Details

1. Select first LGR
2. Select second LGR
3. Select file containing labels
4. Enter the email address to receive the result notification
5. Check collisions if you want to check label collisions as well
6. Check “Output rules” if you want to check output rules for each label
7. Click on “Get diff” button
Hi,

The processing of diff from labels provided in the file 'test-labels.txt' between LGR 'proposed-arabic-lgr-18092016-en' and LGR 'proposed-arabic-lgr-18092017-en' has been successfully completed.

You should now be able to download it from your home screen under the name: '20180823_032644_diff_proposed-arabic-lgr-18092016-en_proposed-arabic-lgr-18092017-en.txt.gz'.

Please refresh the home page if you don't see the link.

Best regards

Email that gives information about the results

Specifies changes in disposition of labels by the revised LGR

Specifies new variants of labels formed by the revised LGR
Review Impact on Existing Labels by Introducing a New LGR

Agenda Item #11
Select Get Collisions in a List of Labels

Click on “Get collisions in a list of labels” button to determine label collisions from an existing file if a new LGR is introduced – for example, two unique labels become variants of each other.
Enter Details

1. Select LGR
2. Select Labels file
3. Enter the email address to receive the result notification
4. Check “Full Dump” to get summary of each operation done on the labels
5. Check “Output rules” to get rules that the label has gone through
6. Click on “Get collisions”
Hi,
The processing of collisions from labels provided in the file 'test-labels.txt' in LGR 'proposed-arabic-lgr-18092017-en' has been successfully completed. You should now be able to download it from your home screen under the name: '20180823_031221_collisions_proposed-arabic-lgr-18092017-en.txt.gz'. Please refresh the home page if you don't see the link.
Best regards

Validate Multiple Labels Using LGR(s)

Agenda Item #12
Select Generate Disposition Annotations

1. Click on “Import” to load existing LGR file(s). See “Import” for details.

2. Click on “Generate disp. annotations” button to validate labels given in a text file.
Enter Details for Single LGR

1. Select LGR

2. Select Labels file for validation. The labels file contains single label per line in UTF-8 format

3. Enter the email address to receive the result notification

4. Click on “Annotate” button
Enter Details for Merged LGR

1. Select LGR
   Optional file of existing labels to check for collisions

2. Select a script from the list of the scripts of different LGRs forming the merged LGR

3. Select Labels file for validation

4. Enter the email address to receive the result notification

5. Click on “Annotate” button
Hi,
The processing of annotation from labels provided in the file 'lao-test-labels.txt' in LGR 'proposal-lao-lgr-31jan17-en' has been successfully completed.
You should now be able to download it from your home screen under the name: '20180823_033613_annotation_proposal-lao-lgr-31jan17-en.txt.gz'.
Please refresh the home page if you don't see the link.

Cross-script variants of the label

Disposition of cross-script variants

Specifies the LGR (from a set of multiple LGRs) that is used to generate these cross-script variants

Input label U+0561 U+0575 U+0580 (ω̄) has cross-script variants:
- Cross-variant U+0448 U+0575 U+0580 (ω̄), disposition invalid:
  + U+0448 (ω): Cyril

Input label U+0581 U+0561 U+0579 U+0586 (γω̄) has cross-script variants:
- Cross-variant U+0581 U+0448 U+0579 U+0586 (γω̄), disposition invalid:
  + U+0448 (ω): Cyril
  - Cross-variant U+0067 U+0561 U+0579 U+0586 (γω̄), disposition invalid:
    + U+0067 (γ): Latn

Input label U+0566 U+0578 U+057D (μ̄) has cross-script variants:
- Cross-variant U+0566 U+0578 U+0075 (μ̄), disposition invalid:
  + U+0075 (μ): Latn
  - Cross-variant U+0566 U+006E U+057D (μ̄), disposition invalid:
    + U+006E (n): Latn

Input label U+0071 U+0578 U+057D (μ̄), disposition invalid:
  + U+0071 (q): Latn
- Cross-variant U+0071 U+0578 U+0075 (μ̄), disposition invalid:
  + U+0071 (q): Latn
  + U+0075 (μ): Latn
- Cross-variant U+0071 U+006E U+057D (μ̄), disposition invalid:
  + U+0071 (q): Latn
  + U+006E (n): Latn
- Cross-variant U+0071 U+006E U+0075 (μ̄), disposition invalid:
  + U+0071 (q): Latn
  + U+0075 (μ): Latn
  + U+006E (n): Latn
Compare LGRs

Agenda Item #14
Click on “Compare two LGRs” under the “Tools” tab for comparing LGRs.
Union, Intersection or Difference

1. Select first LGR
2. Select second LGR
3. Select "Union", "Intersection" or "Diff" to perform relevant function on the two LGRs
4. Click on the "Compare" button
With Merged LGRs, Only Difference

1. Select first LGR
2. Select second LGR
   - “Diff” selected by default
3. Click on the “Compare” button

Note that comparison will be performed only between two LGR sets or two simple LGRs, union and intersection are not available for LGR sets.
Result of Difference function

Differences of two LGRs

Important Note: These operations only provide provisional results which must be manually reviewed and finalized.
