

Dear Registrar,

ICANN is pleased to share that the [Registration Data Request Service](#) (RDRS) will publicly launch for requestors on **Tuesday, 28 November**. This means that if you have opted into the service, you will begin to receive real requests through the Naming Services portal (NSp) starting on 28 November.

If you haven't done so already, we encourage you to opt into the RDRS to receive and manage nonpublic gTLD registration data requests in one convenient location through the NSp.

For more information, visit the [NSp portal for Registrars](#) for a link to the portal, user guides, FAQs, and instructional videos on the RDRS.

Best regards,
Andee Hill
Director, GDD Accounts
