

Dear Registrars,

Ahead of the public launch in November 2023, the Registration Data Request Service (RDRS) is now available for registrars to opt in via the Naming Services Portal (NSp).

This early access allows registrars to opt in to the RDRS to prepare for incoming requests including adding additional users in NSp and receiving RDRS requests via email using PGP keys. Please note that PGP email encryption feature will not be ready until full launch of the service, but registrars will have a place to store their keys until then.

Please register for one of the following webinars to gather instructions and ask questions about RDRS.

- [Tuesday, 26 September at 1:00 UTC](#)
- [Thursday 28 September at 15:00 UTC](#)

Visit the [NSp portal for Registrars](#) for a link to the portal, user guides, FAQs, and instructional videos on RDRS. In addition, the recordings of both above webinars will be available.

If you have any questions, concerns, or to request test disclosure requests be added to the portal once you opt in, please contact your account manager or globalsupport@icann.org with the subject line *RDRS*.

Best regards,

Andee Hill
Director, GDD Accounts
