Re: Research & Development Proposal

i-DNS.net International is the company behind the Internationalized Domain Name System (IDNS) - technology that allows people to use the language of their choice for their Internet Domain Name. i-DNS.net International is headquartered in the United States at Silicon Valley and currently has regional offices in Singapore, Taiwan, Hong Kong, China, Japan and India.

We understand that ICM is submitting an application to the Internet Corporation for Assigned Names and Numbers ("ICANN") to become the exclusive operator and sponsor for the ".XXX" and ".KIDS" Top-Level Domain registry.

We have discussed a proposed agreement whereby IDNS will provide fee based Research And Development services to ICM to develop the following technology solutions:

- a. Domain name record rating and categorization technologies
- b. Advanced Internet protocol filtering technologies
- c. Generic and country based WHOIS database aggregation services
- d. Multilingual domain name registration

Assuming an R&D agreement with ICM is reached, I-DNS will dedicate certain of its key personnel to be devoted to the design, development, management and operation of the proposed research and development project.

Yours very truly,

Douglas Grabe
Vice President and General Manager
i-DNS.net International Inc.
